

## MOISTURE ALARM

FOR DUCTED A/C SYSTEMS

Ford and Doonan installations are equipped with a water sensor in the drip tray under the indoor unit (as shown below)

If moisture is sensed the alarm will sound. This is an audible cue for a potential drainage fault and is in addition to the safety drain installed into your eave. Your eave drain would normally be dripping if the alarm is sounding.

***Note: The alarm sounding is not a cause to panic***

The alarm is usually located on a wall in a cupboard or similar and can be disabled by simply unplugging the cord from the T-Care unit.

If alarm sounds, turn off your system and contact
